**Amendments to the Claims**

**Listing of Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A method for correcting for exposure in a digital image which was captured by an image capture device and which is to be printed on a printer which forms monochrome or color images, on a medium, comprising the steps of:

a) providing a plurality of exposure and tone scale correcting transforms, each such transform being unique to ~~an~~ a different exposure condition and which corrects exposure and tone scale for a digital image captured by the capture device for such unique exposure conditions and to be printed by the printer;

b) applying the plurality of transforms to the digital image and printing a plurality of images corresponding to the digital image on which the transforms were applied; and

c) determining from the printed plurality of images the most satisfying printed image to the user which corresponds a particular transform to be used to make visual images from the digital image.

2. Cancelled.

3. Cancelled.

4. (currently amended) A method for correcting for exposure in a digital image which was captured by an image capture device and which is to be printed on a printer which forms monochrome or color images, on a medium, comprising the steps of:

a) providing a plurality of exposure and tone scale correcting nonlinear transforms, each such nonlinear transform being unique to ~~an~~ a different exposure condition and which corrects exposure and tone scale for a digital image captured by the capture device for such unique exposure conditions and to be printed by the printer;

b) applying the plurality of nonlinear transforms to the digital image and producing a plurality of visual digital images on a display and printing on a particular printer such plurality of visual digital images corresponding to the digital image on which the nonlinear transforms were applied; and

c) determining the most satisfying printed image to the user which corresponds a particular nonlinear transform to be used to make visual images from the digital image which is corrected for exposure and tone scale when printed by the printer.

5. (original) The method of claim 4 wherein the image capture device is a digital camera and the medium is a photographic silver halide element, ink jet receiver or thermal print medium.
